ABSTRACT

An example of a game controller is removably attachable to a main unit having a main unit-side slide member and configured to execute game processes. The game controller includes: an operation section; and a controller-side slide member configured to slidably engage with the main unit-side slide member in a slide direction. The controller-side slide member has a first end and a second end in the slide direction, and the game controller is configured to be attached to the main unit by inserting the controller-side slide member into the main unit-side slide member from the first end. The controller-side slide member includes: a fixed portion that protrudes from a surface of the game controller and is fixed to the surface; and a pivoting portion that is connected to the fixed portion and is configured to pivot relative to the fixed portion.
